

CSE 101 - Computer Engineering Concepts & Algorithms (2020 Fall)

LAB#1 - LINUX BASICS

- 1- Open a terminal.

A terminal window with a dark purple background. The title bar shows 'sgoren@ubuntu: ~'. The prompt 'sgoren@ubuntu:~\$' is visible with a white cursor.

- 2- Open manual page of command "ls". Type "man ls"

A terminal window showing the manual page for the 'ls' command. The title bar is 'sgoren@ubuntu: ~'. The content is as follows:

```
LS(1)                                User Commands                                LS(1)

NAME
  ls - list directory contents

SYNOPSIS
  ls [OPTION]... [FILE]...

DESCRIPTION
  List information about the FILES (the current directory by default).
  Sort entries alphabetically if none of -cftuvSUX nor --sort is speci-
  fied.

  Mandatory arguments to long options are mandatory for short options
  too.

  -a, --all
      do not ignore entries starting with .

  -A, --almost-all
      do not list implied . and ..

  --author
      show author names for files

Manual page ls(1) line 1 (press h for help or q to quit)
```

- 3- Type "ls" to see directory contents.
- 4- Make a directory by typing "mkdir lab1"
- 5- Do "ls" again.
- 6- Change your current directory to lab1 by typing "cd lab1" and do "ls -al"

```

sgoren@ubuntu: ~/lab1
sgoren@ubuntu:~$ man ls
sgoren@ubuntu:~$ man cd

sgoren@ubuntu:~/lab1$

```

- 7- Open the manual page for command “tee”.

```

sgoren@ubuntu: ~/lab1
TEE(1)                                User Commands                                TEE(1)

NAME
    tee - read from standard input and write to standard output and files

SYNOPSIS
    tee [OPTION]... [FILE]...

DESCRIPTION
    Copy standard input to each FILE, and also to standard output.

    -a, --append
        append to the given FILES, do not overwrite

    -i, --ignore-interrupts
        ignore interrupt signals

    --help
        display this help and exit

    --version
        output version information and exit

    If a FILE is -, copy again to standard output.
    Manual page tee(1) line 1 (press h for help or q to quit)

```

- 8- Create a file called hello.txt and by typing “tee hello.txt” and press enter, then type “Hello from my first text file” and then type “Ctrl-D”.
- 9- Do “ls -al” to see whether you created a file or not. To see the contents of your file type “more hello.txt”. Do “man more” to open the man page.

```

-rwxr-xr-x  1 sgoren sgoren   0 Eyl 18 17:17 new.txt

```

- 27- Use alias to make remove interactive by typing “alias rm=”rm -i”. When you try to remove a file it will ask your permission. Also “which rm” tells us where the “rm” command executable resides.

```

sgoren@ubuntu: ~/lab1
sgoren@ubuntu:~/lab1$ alias rm="rm -i"
sgoren@ubuntu:~/lab1$ which rm
/bin/rm
sgoren@ubuntu:~/lab1$ ls
hello1.txt  hello3.txt      hello5.txt  list-of-files.txt
hello2.txt  hello4_old.txt  hello.txt   new.txt
sgoren@ubuntu:~/lab1$ rm hello5.txt
rm: remove regular file 'hello5.txt'? no

```

- 28- Often you may not know the available commands or libraries. Use “**apropos**” to find out. For example, suppose we are looking for a browser. Then we type “apropos browser”. You can see a browser called firefox is available.

```

sgoren@ubuntu:~/lab1$ apropos browser
charmap (1) - Unicode character picker and font browser
firefox (1) - a free and open source web browser from Mozilla
git-web--browse (1) - Git helper script to launch a web browser
gnome-character-map (1) - Unicode character picker and font browser
gucharmap (1) - Unicode character picker and font browser
infobrowser (1) - read Info documents
libsmbclient (7) - An extension library for browsers and that can be...
sensible-browser (1) - sensible editing, paging, and web browsing
smbtree (1) - A text based smb network browser
viewres (1) - graphical class browser for Xt

```

- 29- Find out available editors by typing “apropos editor”. Type “**ps**” to list the current running processes. Then invoke gedit, xedit, emacs by running in the background by appending a “&”. So that you can use the terminal. Then type “ps” again.

```

sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
  8782 pts/0        00:00:00 bash
  9538 pts/0        00:00:00 ps
sgoren@ubuntu:~/lab1$ gedit & emacs & xedit &
[1] 9539
[2] 9540
[3] 9541

```

```
sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
 8782 pts/0        00:00:00 bash
 9539 pts/0        00:00:00 gedit
 9540 pts/0        00:00:00 emacs
 9541 pts/0        00:00:00 xedit
 9559 pts/0        00:00:00 ps
```

- 30- You can kill these processes either by bringing them foreground by typing “fg” and then do a “Ctrl-C”, or you can just type “kill -9 pid” note that pid denotes process id.

```
sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
 8782 pts/0        00:00:00 bash
 9539 pts/0        00:00:00 gedit
 9540 pts/0        00:00:00 emacs
 9541 pts/0        00:00:00 xedit
 9559 pts/0        00:00:00 ps
sgoren@ubuntu:~/lab1$ fg
xedit
^C
sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
 8782 pts/0        00:00:00 bash
 9539 pts/0        00:00:00 gedit
 9540 pts/0        00:00:01 emacs
 9577 pts/0        00:00:00 ps
sgoren@ubuntu:~/lab1$ kill -9 9539 9540
sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
 8782 pts/0        00:00:00 bash
 9578 pts/0        00:00:00 ps
[1]-  Killed                  gedit
[2]+  Killed                  emacs
sgoren@ubuntu:~/lab1$
```

- 31- Invoke “emacs” in the foreground. But you need to use the terminal, then suspend first process by typing “Ctrl-Z”, then type “bg” to make emacs run in the background.

```
sgoren@ubuntu: ~/lab1
sgoren@ubuntu:~/lab1$ emacs
^Z
[1]+  Stopped                  emacs
sgoren@ubuntu:~/lab1$ bg
[1]+  emacs &
sgoren@ubuntu:~/lab1$ ps
  PID TTY          TIME CMD
  8782 pts/0    00:00:00 bash
  9584 pts/0    00:00:00 emacs
  9587 pts/0    00:00:00 ps
sgoren@ubuntu:~/lab1$
```

32- Redirect from a file and to a file.

```
sgoren@ubuntu: ~/lab1
sgoren@ubuntu:~/lab1$ wc < hello.txt
0  6 30
sgoren@ubuntu:~/lab1$ wc < hello.txt > wcout
sgoren@ubuntu:~/lab1$ ls -l
total 32
-r--r--r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello1.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello2.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello3.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello4_old.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello5_old.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 15:55 hello.txt
-rw-rw-r-- 1 sgoren sgoren 83 Eyl 18 16:38 list-of-files.txt
-rwxr-xr-x 1 sgoren sgoren  0 Eyl 18 17:17 new.txt

sgoren@ubuntu:~/lab1$ more wcout
0  6 30
sgoren@ubuntu:~/lab1$
```

33- Append a file.

```
sgoren@ubuntu:~/lab1$ more wcout
0  6 30
sgoren@ubuntu:~/lab1$ cat hello.txt >> wcout
sgoren@ubuntu:~/lab1$ more wcout
0  6 30
Hello from my first text file.
sgoren@ubuntu:~/lab1$
```

34- Redirect to STDERR (standard error)

```

sgoren@ubuntu:~/lab1$ ls
hello1.txt  hello3.txt      hello5_old.txt  list-of-files.txt  wcout
hello2.txt  hello4_old.txt  hello.txt       new.txt
sgoren@ubuntu:~/lab1$ ls
hello1.txt  hello3.txt      hello5_old.txt  list-of-files.txt  wcout
hello2.txt  hello4_old.txt  hello.txt       new.txt
sgoren@ubuntu:~/lab1$ cat hello7.txt
cat: hello7.txt: No such file or directory
sgoren@ubuntu:~/lab1$ cat hello7.txt 2> errors.txt
sgoren@ubuntu:~/lab1$ more errors.txt
cat: hello7.txt: No such file or directory
sgoren@ubuntu:~/lab1$

```

35- The first Python program. Invoke editor nano. Type as the following and save it as “hello.py”

```

sgoren@ubuntu: ~/lab1
GNU nano 2.2.6      File: hello.py

print ("My first Python program:")

[ Read 2 lines ]
^G Get Help  ^O WriteOut  ^R Read File ^Y Prev Page ^K Cut Text  ^C Cur Pos

```

36- Run hello.py by calling “python hello.py”

```
sgoren@ubuntu: ~/lab1
sgoren@ubuntu:~/lab1$ ls -l
total 40
-rw-rw-r-- 1 sgoren sgoren 43 Eyl 18 18:43 errors.txt
-r--r--r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello1.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello2.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello3.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello4_old.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello5_old.txt
-rw-rw-r-- 1 sgoren sgoren 37 Eyl 18 18:51 hello.py
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 15:55 hello.txt
-rw-rw-r-- 1 sgoren sgoren 83 Eyl 18 16:38 list-of-files.txt
-rwxr-xr-x 1 sgoren sgoren  0 Eyl 18 17:17 new.txt
-rw-rw-r-- 1 sgoren sgoren 39 Eyl 18 18:35 wcout
sgoren@ubuntu:~/lab1$ which python
/usr/bin/python
sgoren@ubuntu:~/lab1$ python hello.py
My first Python program:)
sgoren@ubuntu:~/lab1$
```

37- In order to make an executable of your program, invoke nano and edit the program as the following and save & exit.

```
sgoren@ubuntu: ~/lab1
GNU nano 2.2.6 File: hello.py

#!/usr/bin/python3

print ("My first Python program:)")

[ Wrote 4 lines ]
^G Get Help ^O WriteOut ^R Read File ^V Prev Page ^K Cut Text ^C Cur Pos
^X Exit ^J Justify ^W Where Is ^N Next Page ^U UnCut Text ^T To Spell
```

38- Then give execute permission to hello.py and run it as the following.

```
sgoren@ubuntu:~/lab1$ chmod 755 hello.py
sgoren@ubuntu:~/lab1$ ls -l
total 40
-rw-rw-r-- 1 sgoren sgoren 43 Eyl 18 18:43 errors.txt
-r--r--r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello1.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello2.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello3.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello4_old.txt
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 16:27 hello5_old.txt
-rwxr-xr-x 1 sgoren sgoren 57 Eyl 18 19:00 hello.py
-rw-rw-r-- 1 sgoren sgoren 30 Eyl 18 15:55 hello.txt
-rw-rw-r-- 1 sgoren sgoren 83 Eyl 18 16:38 list-of-files.txt
-rwxr-xr-x 1 sgoren sgoren  0 Eyl 18 17:17 new.txt
-rw-rw-r-- 1 sgoren sgoren 39 Eyl 18 18:35 wcout
sgoren@ubuntu:~/lab1$ ./hello.py
My first Python program:)
sgoren@ubuntu:~/lab1$
```
