CSE 114
Fundamentals of Computer Programming
Lab exercise

In this lab exercise, you will implement the following tasks in C:

- Populate an array of size 100 with random integers between 1 and 10.
- Display frequency of each number, i.e. if 7 has appeared 24 times, then frequency of 7 is 24.
- Maintain an array of size 10 to keep frequency of the integers.
- Write a function to display the two integers with highest frequency.
